## Introduction

Teachers' First priority is the education of their students and they are accountable for achieving the highest possible standards at work. Teachers have strong subject knowledge, keep their knowledge and skills up-to-date and are self-critical. They also work with parents in the best interests of the students. In order to define the minimum level of knowledge and values expected of the teachers from the time of being appointed, the need emerged for the Jordanian teacher Standards.

The primary purpose of the Jordanian Teacher Standards is to define the range of teacher characteristics needed (knowledge, values, etc.) in order to effectively provide the teachers with professional development programs. The Standards provide a benchmark against these characteristics, and can be used by the teachers to confirm successful teaching practices and help determine the areas and priorities of their own professional development.

The Jordanian Teacher Standards are meant to introduce some significant changes in terms of the structure, content and application of education. This document is designed to assist those who will be using the Standards to understand these changes and implement the standards effectively.

Teachers aspiring to develop and further their career will find the Standards a helpful guide to the scope of the teaching role and the areas they want to develop.

# **Chapter One**

**The Theoretical Framework of the Foreign Language  
Teacher's Professional Development**

## **The Theoretical Framework of the Foreign Language Teacher's Professional Development**

The need for learning activities to identify the teacher's identity is necessary since they reflect the qualities, abilities and skills required by the teacher. These activities in turn, play the role of a career passport, which includes a social, political, psychological and educational system. They also include specific conceptual needs of the teacher's identity.

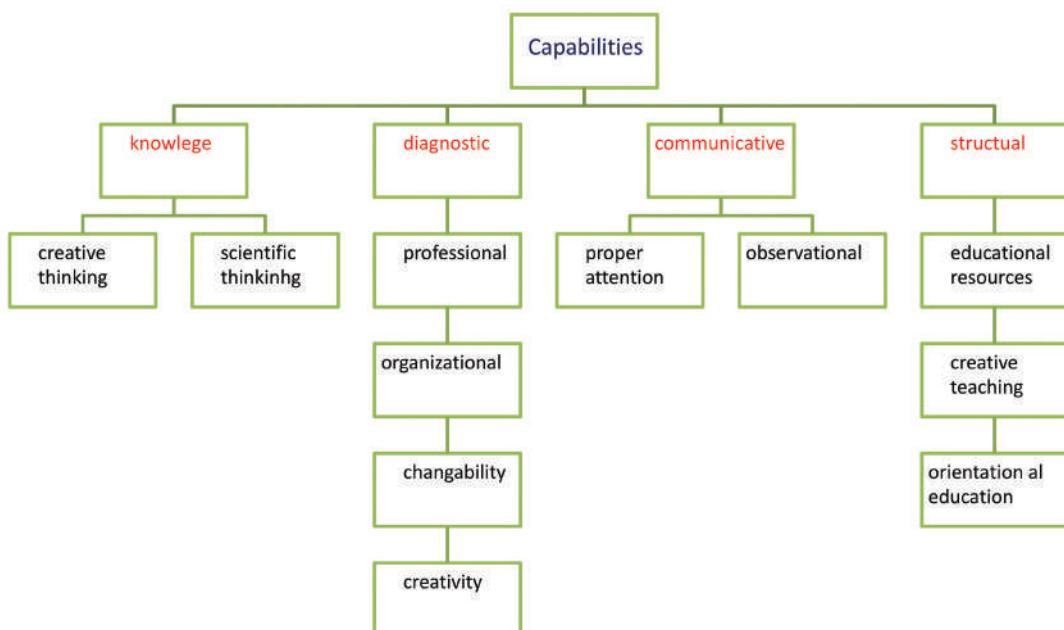

Consequently, it is necessary to map the teacher's training needs in all the key areas; professional identity, educational, psychological and conceptual training needs. This will provide the foundation of relevant training development. This can be illustrated by the following points:

- General needs (in order to meet the needs of the teacher's identity), in the following areas:
  - Ideological approach : the worldview and socio-political activity, respect of the state laws and social responsibility, dignity and patriotism, and the conscious support of religion and society.
  - Professional / educational approach: attitudes towards the profession, ability to work in a team, respect for learners, respect for principles, good morals, development of aesthetics and imagination, justice, determination, patience and endurance, determination towards themselves and students' stability, emotional balance, self-control and a healthy lifestyle.
  - Mental approach: mental activity, scientific performance, interests and incorporeal needs, moral culture, and the teacher's readiness for self-learning.
- Cognitive needs: psychological, educational and cognitive training needs (knowledge, skills, abilities) for the teacher.
- Special needs: knowledge of the physiological development of students at different age levels, knowledge of psychology and pedagogy, patterns of formation and methods, and matters affecting the development of personality to transfer the specialized knowledge and the soft skills of the teacher (related to the subject) to students.
- Accordingly, the teacher should have knowledge and awareness of the following aspects:

- The ideological aspect: the educational policies of the state, and the importance of forming well-established beliefs.
- The social aspect: the culture of work, the social basis of the educational orientation, team work, the personality of the teacher, and cooperation.
- The ethical aspect: the ideological and moral qualities of the younger generation, the role of ethics in the development of societies, and the ethics of the teacher.
- Psychological aspect: the main provisions of general psychology, psychology of growth, and psychological characteristics of children, adolescents and youth at different ages.
- Educational aspect: the educational system and continuous learning, theories of teaching and learning.
- The economic aspect: the economic policies of the state, the structure of the national economy, the economics of education
- Health and physiological aspect: health and physiological needs, security and safety standards in organizing and delivering guidance and education.
- Environmental aspect: scientific and technological growth and their effects on the environment, environmental balance, environmental protection, and ways to achieve environmental learning among students.
- The legal aspect : the constitution and legislations, laws, regulations, rules of work discipline, the basics of legal learning among students.
- The aesthetic aspect: the aesthetic role in human activity, aesthetic sides in the teacher's work, ways to achieve aesthetic learning among students' opportunities to create educational and aesthetic situations through classroom and extracurricular activities
- The general cultural aspect: ideas related to professional culture, teaching skills, and teacher ethics and politeness.
- Digital information (knowledge) aspect : data collection, presentation of knowledge, combinations of scientific studies, periodic and reference literature, data preparation and documentation.
- Organizational aspect: Scientific planning and organization of activities.

The teacher should also be able to utilize knowledge and specialized skills in a creative and a productive way to achieve advanced results in teaching students within a moral framework.

The capabilities that the teacher should demonstrate are illustrated in the figure below:

It should be noted that the structural, communicative, diagnostic and cognitive capabilities play a major role in achieving the capabilities that were presented above.

- Structural Capabilities: Include the ability to select and adapt teaching materials and knowledge in order to suit the students' abilities, levels and models of planning, develop individual and team personality, analyze and evaluate educational and social events, plan students' mental -activity, predict the challenges that students may face and expected consequences to establish a rational and logical educational structure for educational activities.
- Communicative Capabilities: Include the ability to identify changes in the students' mentality based on changes in form and behavior; to create a common language; establish a truly interactive and practical relationship among students' and to create effective educational methods that

influence the students' educational positive physiological, behavioral and cognitive development.

- **Organizational Capabilities:** Include the ability to plan, lead students' education, organize classroom and extracurricular activities, provide an educational environment that develops students practical and moral readiness for work, simulate an environment similar to the work environment within working groups of students; engage in productive relationships with the community, establish cooperative relationships with the parents and hold periodic meetings with them to evaluate the results obtained and identify the required steps to achieve the appropriate organization and implementation of activities.
- **Cognitive Capabilities:** Include the ability to analyze and summarize colleagues' experiences, and to utilize personal experiences; encourage innovative practices and create self- exploratory tasks consistent with the curriculum.

Cognitive Capabilities also refer to the qualities of the teacher, which can ensure a careful analysis of events on the one hand, and the successful use of images (tags, symbols, concepts, ideas, and arts), reflecting reality on the other hand.

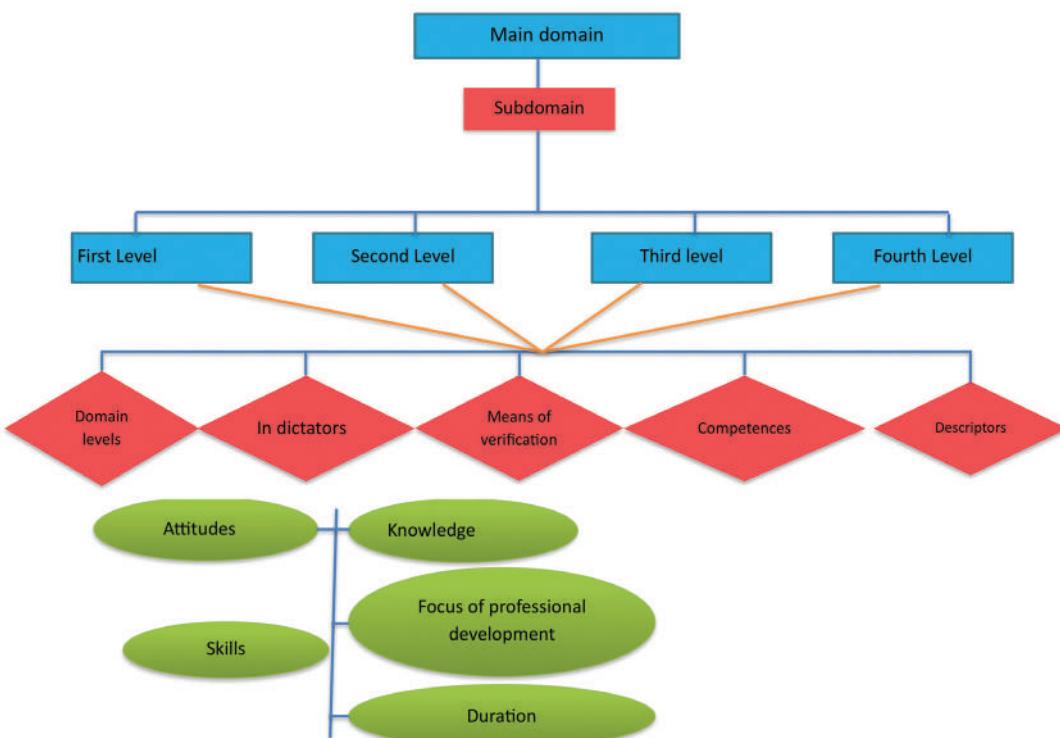

**Diagnostic and creative Capabilities:**.. The diagnostic capabilities lead to the creation of specific and rapid performance indicators on general regulating issues, access to general conclusions based on the different Performance Indicators and Means of verification , and then conducting diagnostics. It enables the discovery of new solutions that may not be known before, by developing the ability to imagine new solutions.

In addition to setting lesson objectives, choosing learning materials, and identifying key Performance indicators necessary to develop core competencies, teachers must be able to develop content based on the concepts of educational materials according to students' age, mental capacities and skills.

Teachers have the following professional training needs:

- Knowledge of the content they teach.
- Exploring innovations related to the subject area.
- Mastering teaching strategies.
- Acquiring advanced experiences in the subject area .

- Mastering teaching and assessment strategies.
  - Carry out continuous professional self-development.
- Structuring National Standards for professional teacher development
- The structure of the National Professional Standards of the teacher for each criterion can be illustrated as follows:

The document includes two main domains which are analyzed later. Each main domains and consists of subdomains that are described as minor criteria.

The minor professional standards have been prepared and organized into four levels, including professional practices that fit the levels of the proposed professional license for the teacher. Then, Performance indicators which include suggested Means of Verification have been developed for each criterion to help in the creation of evaluation tools later.

Professional development competencies are included to guarantee the implementation of each professional development criteria and to achieve the required standards. In the case of the cognitive professional compe-

tencies, training and direct mentoring should be relied upon, while in the case of emotional and professional skills ,competences and records of the school should be used without ignoring the importance of school achievements and school records

In addition, it includes the competencies, the suggested hours and the methods of how to gain these competencies with the teachers to contribute in building a comprehensive program for the qualification and the professional development of the teachers.

The following three basic components have been adopted in the preparation of the main competencies:

- Professional knowledge / perception and understanding.
- Professional skills / practice and experience.
- Professional participation / transfer of values and attitudes to students (through the teaching process), to colleagues and the community through learning communities, and direct encounters.

The descriptors of the teacher's performance (which describe what the teacher performance should be in each domain and level) are listed in order to build rubric scales to measure the overall performance of the teacher.

The national professional standards document of the teacher deals with the most important criteria to be fulfilled by the teacher within the framework of their career. The document includes seven main areas aimed to develop the professional competencies of the teacher.

# **Chapter Two**

**(Domains, Subdomains, Performance Indicators and  
Means of Verification)**

The Jordanian Professional Standards for Foreign Languages Teachers comprises 13 standards that outline what teachers should know and be able to do. The standards, which are aligned with a global accredited model, are interconnected, interdependent and overlapping.

**The standards are divided into two domains of teaching**

**1- Knowledge.**

**2- Teaching and Learning.**

Within each domain the focus areas provide further illustration of knowledge, teaching and learning. These are then separated into categories based on the four professional career stages; Beginner, Proficient, Highly Accomplished and Lead. The thirteen standards identify what is expected from the teachers within the two domains of teaching. Teacher's demonstration of the standards will occur within their teaching context at their stage of expertise and will reflect the learning requirements of the students they teach.

## Teaching and learning

Teachers apply the most recent strategies and theories relevant to language learning while focusing on teaching the language, teaching through the language and teaching about the language. Additionally, they are responsible for instilling language that students can use to express their ideas, feelings and emotions in real life situations. Teachers use diverse educational resources in the learning process efficiently. They integrate the language skills through appropriate language instructions to enable learners to communicate effectively. Moreover, they promote positive values and attitudes through modeling exemplary behavior and creating a safe learning environment.

## Appendix 2

Guidelines for the use of FL Teacher Standards Document.

The Standards document is considered as one of the most important documents of the educational system. This section clarifies the objectives and sets the guidelines on how to use this document.

First area:

Setting the basis for teacher selection and professional development licensing tests

This includes establishing the criteria for appointing teachers by the human resources administration through the following procedures:

- Determining the admission conditions.
- Building tests for (FL teachers) based on FL Teacher standards.
- Build professional license tests for the different categories and levels.
- The second area:

Professional Development Programs for FL teachers

The process of teachers' professional development - whether centralized (as determined by the Ministry of Education within the curriculum of professional development) or as a response to the needs of the teacher – should adhere to professional standards of reference to ensure consistency and coherence . Therefore, the professional competencies of each standard are included.

The following procedure could insure employment of standards in the professional development of teachers:

- Building an integrative professional development curriculum, by linking (levels, training programs, standards levels and professional development policy) and to identifying compulsory and voluntary programs.
- conducting needs analysis studies, where needs-based collection tools are built on certain criteria.
- Accreditation of the various training programs (pre/ in service).

Third area: Evaluation and review of professional performance and accountability

The Standards can also be utilized for evaluation and review of teachers' performance. This can be achieved by building an integrated evaluation methodology, and specific tools based on performance benchmarks that are built at the end of each standard.

With this respect, the following procedures can be carried out:

- Building the teacher's professional evaluation methodology and tools (standards-based evaluation).
- Performance evaluation for promotion and for professional licensing.
- Accountability of teachers based on standards-based performance evaluation results.

The fourth Area: Self-reflection and professional development plans

The focus is on building a model for the reflection (self-reflection) and professional development of the teachers.

#### The Fourth Area.

##### Self Reflection and Professional Development plans.

The teacher in this area must take the following steps:

- Study the criteria in detail.
- Identify strengths and areas of improvement in relation to the main domains of the FL standards (teachers give themselves points in each main domain).
- Identify development priorities, (areas of strength or areas for improvement) choosing at least three subdomains to be the focus of the self- professional development plan.
- I identify areas of improvement, locate current level and decide the desired level.
- Select development priorities at the subdomain level, with at least five criteria as priorities for action and define the levels at which they wish to work.
- Build a professional development plan by transforming development priorities into development goals, determining the planned professional development activities, the procedures and the time of implementation.

It is recommended that the self-reflection and the professional development plans are done in partnership between the teacher, the principal, the Supervisor and the colleagues through learning communities of practice .It is also preferred to build self-review process on trust and fellowship, and to use the results of self-revision to build.

profession development programs rather than accountability.

All parties involved will be trained to carry out their responsibility.
